

Distinguish, differentiate, compare and explain what is the difference between get and post method. Comparison and Differences.

## Difference Between Get and Post Method

À

S.No.	Get Method	Post Method
1	Get method is designed for reading the info means it requests data from a specified resource.	Post method is designed for posting the info means submits data to be processed to a specified resource.
2	Requests can be cached.	Requests can never be cached.
3	It places the extra info in the URL which allows the page to be bookmarked or emailed.	Requests pass all data directly over the socket connection as a part of HTTP request body and which cannot be bookmarked or emailed.
4	Requests remain in the browser history.	Requests do not remain in the browser history.
5	Less secure because data sent is a part of the URL.	Little safer and secure because the parameters are not stored in browser history or in web server logs.
