

Distinguish, differentiate, compare and explain what is the Difference between MCB and MCCB. Comparison and Differences.

## **Difference between MCB and MCCB and Where it can be used**

MCB is miniature circuit breaker which is thermal operated and use for short circuit protection in small current rating circuit.

MCCB moulded case circuit breaker and is thermal operated for over load current and magnetic operation for instant trip in short circuit condition. Under voltage and under frequency may be inbuilt. Normally it is used where normal current is more than 100A.
