

Distinguish, differentiate, compare and explain what is the main difference between conventional and nonconventional sources of energy. Comparison and Differences.

Difference between conventional and nonconventional sources of energy

1. Conventional sources of energy refer to traditional sources of power like charcoal, firewood, coal, petroleum, etc. Non- conventional sources of energy are recently developed sources of energy from Sun, wind, water, tides, geothermal, etc.
2. Conventional sources of energy are non-renewable. Nonconventional sources are renewable.
3. Generation of energy is expensive in conventional sources. The initial cost of generation is high but cheaper in the long run in nonconventional sources.
4. Conventional sources of energy cause large scale pollution. Nonconventional sources of energy are Eco-friendly sources of energy.
