

Differentiate, distinguish, compare and explain what is the main difference between Pteridophyta and Phanerogams. Comparison and Differences.

Difference between Pteridophyta and Phanerogams

1. Pteridophyta have inconspicuous or less differentiated reproductive organs. Phanerogams have well developed reproductive organs.
2. Pteridophyta produce naked embryos called spores. Phanerogams produce seeds.
3. Ferns, Marsilea, Equisetum, etc. are examples of pteridophyta. Anus, Cycas, fir, etc. are examples of phanerogams.
