

Distinguish, differentiate, compare and explain what is the main difference Between Regular and Irregular Reflection in physics. Comparison and Differences.

Difference Between Regular and Irregular Reflection

S.No.	Regular Reflection	Irregular Reflection
1	It occurs when all the reflected rays from a given smooth surface are parallel for parallel incident rays.	It occurs when for a given set of incident parallel rays, the reflected rays do not remain parallel to each other.
2	Occurs from smooth surfaces like mirror, silver spoon etc.	Occurs from rough surfaces like wood, table, door, book etc.
