

Differentiate, distinguish, compare and explain what is the main differences between homogeneous and heterogeneous mixture. Comparison and Differences.

Differences between Homogeneous and Heterogeneous Mixture

1. A mixture in which same constituents are mixed uniformly is called a homogeneous mixture. A mixture in which different constituents are mixed uniformly, is heterogeneous mixture
2. The component of a homogeneous mixture cannot be seen by naked eye. The component of a heterogeneous mixture cannot be seen by naked eye.
3. Example of Homogeneous mixture: sugar solution. Example of Heterogeneous mixture: Sand and Iron filling.
