

Distinguish, differentiate, compare and explain what is the differences between Terrestrial and Aquatic Environments. Comparison and Difference.

Differences between Terrestrial and Aquatic Environments

1. Terrestrial Environment shows large variations in temperature. Aquatic Environment shows somewhat constant temperature.
2. Terrestrial Environments have high access to light availability and can change according to weather conditions. Aquatic Environments has a low exposure to light and be affected by levels of turbidity.
3. Terrestrial Environment has less buoyancy. Aquatic Environment has greater buoyancy.
