

Finding a good mezzanine builder is always a challenge, especially in these difficult times. A great mezzanine builder like [Aw Structures](#) can help you add space to your existing facility. They're also a key component in improving your workflow and increasing your efficiency. They'll have the expertise to help you decide what type of mezzanine to build, including rack-supported mezzanines, shelving supported and freestanding structures. And they'll understand all the codes and permitting requirements, as well as making sure that all the materials used meet all applicable standards.

## So how do you find a great mezzanine builder?

You can get a great mezzanine builder by following these steps:

**Look for credentials and experience.** Credentials are important because they show that the person has been in business for a long time and has built lots of mezzanines, which gives you confidence that they know what they're doing.

**Get references from previous clients** or people who worked with them before (even if they were just one job). This will give you an idea of how good their work was, and whether or not they listened to what their customers wanted, which is an important quality when hiring someone new.

**Experience of the staff:** Ask questions about how long each member of staff has been working at your company as well as what kind of experience he/she has had building pallet racks before (if any at all). It's also good practice to ask about any training programs available for employees who may be interested in learning new skills such as Mezzanine construction techniques.

First, as with any industry, look for credentials and experience. Make sure they have previous experience building freestanding or shelving-supported structures and that they know how to work with pallet racks.

If you want a project that looks good and feels safe—and if you're looking for something more than just a basic mezzanine platform—make sure your builder has experience working on projects like this before hiring them.

You can also ask them how many years of experience their workers have; if possible, make sure that you connect with the specialists who will be building your mezzanine directly.

You should also ask about their reputation in the industry and whether or not they have any previous clients. If they do, it's probably best to stick with them.

## Get some references

Next, get some references. Ask for some names of satisfied customers who were happy with their work, so you can call them up and ask about their specific experience.

Once you've found a few candidates, it's time to start interviewing them. This is where the reference list comes in handy: ask each candidate what their process was at building out their mezzanine so they can give you an idea of how they would go about working with you. Next, get some references. Ask for some names of satisfied customers who were happy with their work, so you can call them up and ask about their specific experience.

## Conclusion

Hopefully, we've helped you find the perfect mezzanine builder. Remember that they're not just good at building these structures; they also have a lot of experience and expertise in all areas related to them. Remember that even if it seems like a daunting task now, we promise it will be worth it at the end.
